GUYMASTER Release Notes
For version 7.0.4 as of December 12, 2018

Correction in the calculation of Cd for discrete appurtenances, in for CSA S37-18, for various shapes and aspect ratios of cross-section.

GUYMASTER will now interpolate between columns and rows of Table 2 in CAN/CSA S37-18. For greater clarity, the rows in Table 2 differentiate based on aspect ratios of the cross-section as well as for corner radius; the columns differentiate based on the aspect ratio of element length to width as seen by wind.
