

GUYMASTER Release Notes
For version 8.2.2 as of March 10, 2025

1. Fixed the loading factors for the Seismic analysis by avoiding the loading factors being taken from the wrong loading condition when the seismic loading conditions are defined in the list along with other loading combinations.
2. Improved: In monopole finite element analysis, elements are now at least three times the segment diameter, improving the accuracy of results.
3. New feature: Users can now input a reference to another cell and formula in a data cell. This is accomplished by typing an equals sign (=) at the start of the entry.
4. Added: Resistance calculations following the AS/NZS 1170.2 standard have been added.
